

Surfactants

Library Listing – 637 spectra

This library provides a comprehensive collection of surfactant spectra. It is designed for use by scientists with an interest in surfactants and related materials.

The Surfactants Library consists of 637 carefully characterized surfactant spectra organized by trade name and formula. The collection includes detergents, defoaming agents and dispersing agents. Chemically, the classes of compounds include alkyl and aryl polyether glycol ethers and esters, sulfates, sulfonates, phosphates, quaternary ammonium salts, amines, amides, silicones, silicates, glycerides, fluoro-surfactants and other alcohols and esters.

Thermo Scientific wishes to acknowledge the cooperation of Dr. Clara D. Craver and Donald G. Hesse of ChemIR Laboratories in the preparation of this library. Their laboratory obtained the samples from the manufacturers and collected the FT-IR spectral data. The samples were in the form of capillary films or melts on KBr, cast films on KRS-5, or pressed KBr pellets.
